

Dylan J. Palmer

Orlando, FL | (954) 829-2008 | djpalm321@gmail.com | www.linkedin.com/in/dylanpalmer/ | <https://github.com/Ererr123>

EDUCATION

University of Central Florida

B.S. in Computer Science

Orlando, FL

January 2025

GPA: 3.74/4.0 | Coursework: Computer Architecture, Database Systems, AI for Game Programming, Computer Science I & II

University of Central Florida

M.S. in Computer Science

Orlando, FL

Expected May 2027

GPA: 3.83/4.0 | Coursework: Machine Learning, ML Methods for Biomedical Data, Design and Analysis of Algorithms

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, Java C++, C, SQL, HTML, CSS

Frameworks / Libraries: React, Node.js, Jest, Express

Tools & Platforms: Git/GitHub, Docker, MySQL, PostgreSQL, Firebase, REST APIs, AWS (EC2, S3)

EXPERIENCE

IDX Exchange

Remote

Software Development Engineer Intern

June 2026 – September 2026

- Built the backend foundation of a full-stack, Zillow/Redfin-style property search app: a **connection-pooled Express API** over a **Dockerized MySQL 8 database** loaded from MLS tables (rets_property, rets_openhouse), including a paginated, filterable /api/properties endpoint backed by composite indexes.
- Shipped the **React frontend**; a listings page with a unit-tested filters UI and ellipsis-based pagination, plus a property detail page with a photo carousel, lightbox gallery, and an embedded Google Map generated from listing coordinates.
- Implemented a **dynamic filter system** that translates user inputs into validated, parameterized SQL queries with **composite indexing**, and used EXPLAIN analysis to identify and reduce slow-query latency.
- Reorganized the codebase into api/components/pages/hooks/utils, reached **70%+ test coverage**, and tracked down seeded **real-world bugs** (malformed photo JSON, null coordinates, inconsistent city casing) ahead of a demo presentation covering architecture and code review.

Intrastack Solutions

Orlando, FL

Research and Development Intern

Feb. 2026 – April 2026

- Conducted **research and development** on methods for converting desktop and web applications into mobile platforms, and proposing implementation strategies for cross-platform deployment
- Designed **project timelines and roadmaps** to guide development from concept to execution

PROJECTS

Apollo — Worldbuilding Platform

Node.js, Express, PostgreSQL, Prisma, React, JWT, Tiptap

- An application with JWT-based authentication and a relational data model (PostgreSQL/Prisma) supporting ownership across users, worlds, and documents for writers and creators alike.

Shootout — 3D Action-Survival Game

Unity, C#, C++, Blender

- A 3D action-survival game in Unity with physics-based combat, enemy AI behavior, and realistic projectile physics; designed and optimized 3D environments and character assets in Blender.

Hypoglycemia Predictor — Glucose Forecasting & Risk Classifier

Python, PyTorch, scikit-learn, pandas

- A two-stage ML pipeline that forecasts glucose with an N-HiTS network over CGM, insulin, and activity data, then feeds its learned features into a gradient-boosting classifier to flag hypoglycemic events

INTERESTS

- Creative Writing, Walking, Basketball, Music
